

# IS REMEMBERING YOUR PASSWORDS A CHORE?

**THREE WAYS TO ENSURE YOU NEVER  
FORGET THEM AGAIN**

# 1. USE THE SAME CORE AND DIFFERENT START / ENDS

Sky\*

G3n3va!

145

## START

THIS CHANGES FOR EACH ACCOUNT

You can save this such as:

**Skype account password:**

Sky\* (core) 145

## CORE

THIS IS ALWAYS THE SAME

This is something you remember and for added security, only you know it and you never write it down

## END

THIS CHANGES FOR EACH ACCOUNT

You can save this such as:

**Skype account password:**

Sky\* (core) 145

## 2. CODE A SENTENCE

To do this, it is easier to start with the sentence and then create the password e.g.

**Sentence:** I went to Bali twice and saw 500 stars

**Password:** lwtB2as500\*

# 3. SAVE YOUR PASSWORDS WITH A SECURE MANAGER

There are multiple options available, here are two of our favourites:

- **Enpass** - which can be used for iOS, Android, Linux and Windows [www.enpass.io](http://www.enpass.io)
- **LastPass** - can be downloaded onto your computer, or used as an app and can also generate strong passwords: [www.lastpass.com](http://www.lastpass.com)
